Professional Summary

Full-stack developer with 5+ years building and upgrading Drupal sites for universities and government, and connecting them to React and Vue.js frontends through REST, JSON:API and GraphQL. Most of my work is modernizing legacy Drupal projects: Drupal 8 to 10 migrations, performance upgrades, custom modules and the features each user role needs. I start from the people who use the system: I gather their requirements, turn them into specs, build the solution and support it after launch, acting as the link between technical and non-technical stakeholders.

Work Experience

Specialized Drupal Consultant (Short-term Project) 03/2026 - 04/2026

C&S Informática | Remote | Contract

Part of the team that modernized and maintained a high-traffic Drupal 10 platform for a government client.

- Adapted content during a Drupal 8 to Drupal 10 migration, resolved sync conflicts and kept code requirements working in both versions at once.
- Took over high-priority incidents escalated beyond the original team's scope, diagnosed the blockers and kept the platform online.
- Set up role-based access control (RBAC) and publishing rules in Drupal 10, consistent across development, staging and production.
- Built JSON:API integrations and publishing workflows that keep unpublished content private.
- Standardized environment management with Composer, DDEV and Drush for more reliable deployments.
- Audited and refactored custom and contributed Drupal modules to reduce technical debt.

Full-Stack Developer (Drupal + React) 2023 - 2026

Activarte | Remote

Worked in an agile team that moved a monolithic Drupal site to a headless architecture: Drupal serves content over REST APIs with OAuth2, and React renders the frontend.

- Upgraded the platform for speed and performance, and added the features each user role needed.
- Built the REST endpoints and OAuth2 authentication flows between Drupal and the React frontend.
- Built custom React components that consume JSON:API payloads.
- Worked in Agile sprints in Jira, with cross-functional code reviews on Bitbucket.

- Taught Drupal development to a teammate and helped with code quality in reviews.

Drupal/Moodle Developer | Part-time 2021 - Present
UADER - Rectorado | In-office
Lead the university's web projects on Drupal and Moodle, and act as the main link between academic, administrative and government stakeholders: I gather requirements, turn them into technical specs and build them.

- Migrating a legacy Drupal monolith to a headless frontend with React and GraphQL.
- Building a new internal university application from scratch with Vue.js.
- Built and maintain three university portals with 57,000+ active users and 786,000+ events.
- Added ECA automations and custom Drupal modules that simplify each area's interfaces and workflows, so staff finish common tasks faster.
- Upgraded the sites for speed and performance, and fixed recurring server bottlenecks.
- Built e-UADER, a course enrollment platform connecting Drupal Commerce to Moodle's REST API: 2,000+ registered users and 1,100+ certificates issued in its first 4 months.
- Trained a fellow developer in Drupal programming, and train university staff to use the sites: publishing content, updating pages and creating certificate templates.
- Building a multi-agent AI orchestrator that gives LLMs separate roles for code generation, review and deployment.

Core Skills

Languages & Frameworks: React.js, Vue.js, PHP, JavaScript (ES6+), Java, Symfony, jQuery, Bootstrap, Sass, HTML5, CSS3, SQL

CMS & Ecosystem: Drupal 9/10/11 (Theming, Custom Modules, Hooks, Entity API, Configuration Management, Commerce, ECA, Search API), Moodle

Web Development & Performance: RESTful APIs, GraphQL, JSON:API, OAuth2, Web Optimization, Debugging (Xdebug, Chrome DevTools)

Databases & Tools: MySQL, PostgreSQL, CI/CD, Pantheon, Composer, DDEV, Drush, PHPUnit, Git (GitHub, GitLab, Bitbucket), VPN, SSH, Docker, Kubernetes, AWS

Security & Methodologies: OWASP Principles, Secure Authentication, Agile (Scrum, Kanban), Jira
AI & Development Workflows: Multi-Agent System Orchestration, AI-assisted workflows (Cursor, Ollama / Local LLMs), Prompt Engineering.

Education

Autonomous University of Entre Ríos Graduated: July 2025
Degree: Systems Analyst (Analista de Sistemas)
Program: Systems Analysis · Faculty of Science and Technology

Centenario High School 2011 - 2015
High School Diploma: Economics
Minors: Economics and Administration

Languages

Spanish (Native), English (Fluent / Professional Working Proficiency)

Certificates

DevOps Diploma (250 h) Apr 2025
UNC FCEFyN · Mundos E

React.js Jun 2023
Coder House

JavaScript Jun 2023
